

PICK KITCHEN CABINETS YOU CAN TRUST!

DRAWER:

We load drawers at 15 pounds per square foot and operate them through 25,000 cycles, representing 20 years of regular use.

DOOR:

We load a cabinet door with 65 pounds, cycle through open and close 10 times and inspect for visible signs of looseness.

WHY?

To earn the KCMA Certified Seal, kitchen cabinets must be put through a series of 15 tests. During these tests, cabinets are checked for structural strength and finish quality. The cabinet box as well as drawers and doors are tested throughout the process.

STRUCTURAL:

These tests verify the integrity and strength of the cabinets. We load wall-mounted cabinets to 600 pounds and look for structural failure.

FINISH:

We expose the finish to vinegar; lemon, orange and grape juices; tomato ketchup; coffee; olive oil; 100-proof alcohol; mustard; and to long periods of exposure to a detergent and water solution.
